YOHANNES TEFERI

BACKEND-FOCUSED FULL-STACK DEVELOPER | AGENTIC AI ENGINEER

Addis Ababa, Ethiopia | yohannes.teferi@example.com | LinkedIn: linkedin.com/in/yohannes-teferi-071159371
GitHub: github.com/yohannesteferi715 | Telegram: @yoni715 | Portfolio: Live portfolio

PROFESSIONAL SUMMARY

Software Engineering student specializing in backend engineering, full-stack application development, and Agentic AI systems. Focused on designing asynchronous APIs, modular backend architectures, relational database systems, and intelligent applications powered by Large Language Models (LLMs). Experienced with Python, FastAPI, Django REST Framework, PostgreSQL, React.js, and TypeScript. Strong foundation in data structures and algorithms, object-oriented design, system architecture, and software engineering principles, with particular interests in distributed systems, scalable backend infrastructure, and autonomous AI agents.

TECHNICAL SKILLS

Backend Engineering: Python, FastAPI, Django, Django REST Framework, RESTful API design, asynchronous programming, JWT authentication, OAuth2, Celery, Redis.
Agentic AI & LLMs: Agentic AI systems, multi-agent orchestration, RAG, semantic search, vector databases, pgvector, ChromaDB, tool calling, LLM evaluation.
Frontend: React.js, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, responsive design, state management, Vite.
Databases: PostgreSQL, SQLite, SQL, database normalization, indexing, query optimization, connection pooling, ACID transactions.
Engineering & DevOps: Data structures and algorithms, OOP, system design, SRS, SOLID principles, Docker, Git, GitHub, unit testing.

SELECTED PROJECTS

Autonomous Agentic RAG Knowledge Engine

Technologies: *Python, FastAPI, vector databases, LangChain, LLMs, React.js*

- Developed an intelligent knowledge assistant using Retrieval-Augmented Generation and semantic vector search.
- Implemented document chunking, embedding generation, and retrieval workflows for contextual information access.
- Designed multi-step agent workflows with tool execution and query decomposition for complex questions.
- Integrated streaming responses and source attribution to improve transparency and user experience.

High-Throughput REST API & Asynchronous Task Pipeline

Technologies: *Python, FastAPI, Django REST Framework, PostgreSQL, Redis, Celery, Docker*

- Designed backend API architecture with structured request validation and authentication workflows.
- Implemented Redis caching and asynchronous background processing using Celery.
- Applied PostgreSQL relational modeling and transaction management to support data consistency.
- Explored concurrent request handling and performance benchmarking to evaluate API responsiveness.

Full-Stack Developer Platform & Interactive CMS

Technologies: *React.js, TypeScript, Tailwind CSS, Python API, SQLite, PostgreSQL*

- Developed a responsive full-stack platform with an interactive interface and administrative dashboard.
- Implemented dynamic content management and backend API integration.
- Designed an interactive system architecture visualization and reusable frontend components.

ENGINEERING EXPERIENCE & FOUNDATIONS

Backend Systems & Agentic AI Development

Designed Agentic RAG workflows combining vector embeddings, semantic retrieval, and multi-step tool execution. Developed asynchronous API services using FastAPI and Pydantic, and explored Redis caching and Celery background processing. Studied LLM evaluation and guardrails to improve the reliability of AI-generated outputs.

Full-Stack Development & API Architecture

Developed React.js and TypeScript interfaces and Django REST Framework APIs. Worked with custom permissions, pagination, API documentation, software requirements specifications, entity-relationship diagrams, and modular service layers.

Core Backend Engineering & Computer Science

Applied data structures, algorithms, and Big-O analysis to software problem-solving. Designed normalized relational schemas and developed Django applications using authentication, ORM abstractions, and server-side rendering.

EDUCATION

Haramaya University — Bachelor of Science (B.Sc.) in Software Engineering

Five-year engineering curriculum. Relevant coursework: Programming Fundamentals, Data Structures and Algorithms, Database Management Systems, Object-Oriented Design, Software Design and Architecture, Software Testing and Quality Assurance, Cloud and Distributed Computing, and Software Development Life Cycle.

LANGUAGES

Amharic: Professional proficiency **Afaan Oromoo:** Professional proficiency **English:** Professional proficiency
